INSTRUCTIONS FOR USING THE NATIONAL AED REGISTRY

Welcome to the National AED Registry.

The National AED Registry is a free service made available to you by Atrus Inc., creators of the AED Link™ system.

Where available at your local 9-1-1 center, AED Link rapidly links Sudden Cardiac Arrest victims, AEDs, and trained AED responders in the event of a Sudden Cardiac Arrest. When this system is activated in your community, you have the opportunity to voluntarily respond with this potentially lifesaving device by becoming a volunteer citizen responder. This is totally optional. A list of communities participating in AED Link is in Appendix B at the end of these instructions.

The National AED Registry is a robust repository for the AED Program data that is entered when you register. The Registry has no banner ads, does not spam or otherwise use this information.

One of the most important functions of the National AED Registry are the monthly email reminders sent to Site Managers/AED Coordinators and Inspectors to inspect, maintain and service the AEDs in their Program to ensure they are "operationally ready". By that we mean the battery is installed and working, the electrode pads are installed, and equally important that the AED is in the same location as previously reported in the Registry.

Additionally, prior to the expiration dates for the battery and/or the electrode pads, Site Managers/AED Coordinators and Inspectors will begin receiving email reminders of the upcoming expiration dates. These notices will become more frequent as the date nears and, if the accessories have not been replaced, continue until they are replaced.

That's a brief overview of the benefits available once you have registered in the National AED Registry.

Let's begin!

Start by opening any browser window to access the National AED Registry or press CTRL and click on the following link http://nationalaedregistry.com/ to open or reverse click your mouse to open the Hyperlink). The use of Google Chrome or Mozilla Firefox is recommended.

You should be looking at a page that looks like the above screen shot.

At the top of the opening page of the National AED Registry, there are two buttons - "Sign in" or "Register". There is also a "Sign up Now" button at the bottom of the picture.

If you have not registered your AED Program in the National AED Registry, click on the "Register" button at the top of the opening page or the "Sign up Now" button at the bottom of the picture.

Please follow along to complete registering in the National AED Registry.

IMPORTANT: PLEASE NOTE THAT THROUGHOUT THE WEBSITE THERE ARE REQUIRED FIELDS DENOTED BY (*).

Please complete the page below, noting all required fields (*) including the acceptance of terms and conditions

Coordinator's AED Training Program: If AED Training is <u>not</u> mandatory, please click on the drop down arrow and highlight "n/a".

Date Training Program Completed: If Training Program is "n/a", then leave current date as shown.

Please don't forget to check the box to "accept the terms and conditions".

Next, you will be asked be add the locations at which AEDs are located for your Program.

Click on "Add New Location".

✔ Program Details	📍 Program Sites	♥ Site AEDs	👍 Finish	

Please describe each general location where AEDs are found throughout your organization. The location names you enter on this page should be fairly basic (e.g. Acme Cafe, Acme Corp 3rd Floor, Acme Corp Bldg C). Later on during the registration process, you will be asked to describe the precise physical placement location of each AED found throughout each site (e.g. behind reception desk, on wall in employee lunchroom, etc.).

Location	Address	City	State	Individuals Trained	

Add New Location   ➡ **Continue**

* denotes required field

We encourage you to refer to the Glossary tab for definitions and clarifications.

Location Information:

Please think of this in terms of a pyramid. At the top will be the name of the company. If there are multiple buildings that house AEDs, please be specific as to the building address and/or name. You will have an opportunity to be specific about the placement within the building on another screen.

Location1: XYZ Bank: Main Street Office

Location2: XYZ Bank: Downtown Branch

Location3: XYZ Bank: Uptown Branch

If it is a home, please use your given name for the residence. Do not just say "Home", but, for example "Steven Jones Residence". If a house of worship, please also use the city. For example, do not just say "ABC House of, but more specifically "ABC House of Worship – (city name)".

A WORD ABOUT ADDRESS VERIFICATION

Because the AED Registry is designed to inform EMS of the location of your device, it is important that the location be as accurate as possible. Often, mapping software will put your "map pin" in the street or other, perhaps distant, location.

Under "Address Verification", please use the dropdown arrow "I'll verify this address"

| I'll verify the address | ▼ |

This will open up a map.

Please type in your address and click "find".

| 653 W Pratt St, Baltimore, MD, United Sta | find |
Zoom in as much as you can to see your location.

653 W Pratt St, Baltimore, MD, United Sta | find
Then drag and drop the map pin to the precise location. This will automatically put the most precise geo coordinates into the system.

653 W Pratt St, Baltimore, MD, United Sta | find
Click "Add New Location" when complete. The following screen will appear.

If you have an additional location(s), please add now by clicking "Add New Location". When you are finished adding locations please click the blue "Continue" button.

You always have the ability to add additional locations in the future.

ADDING AEDS

Here you will begin adding AEDs and assigning them to the locations that you have previously entered. **It would be most helpful to you to refer to "Appendix A" at the end of these instructions for the data fields required for completion.**

Begin by clicking "Add New AED".

This is an example of the "Add New AED Page.

ENTER THE AED INFORMATION IN THE ORDER LISTED BELOW

AED Details:

1. Manufacturer
2. AED Type/Model
3. Serial Number
4. Asset/Tag Number
5. Install Date

Battery and Electrode Information and Expiration Dates: Please do not forget to check the "Is Installed" box in the popup box

AED Location: The location(s) you entered will be available when you click on the drop down arrow

Placement Details: This is the actual place where the AED is located. Please enter as much specific placement details as you can. For example - Inside the front door on the east wall next to the elevator. Try to picture a 911 or EMS Operator telling you where to find the AED as quickly as possible. If you are responding to a sudden cardiac arrest time is the most critical variable in cardiac arrest survival

Mobile AED: Please select the checkbox if your AED is in a vehicle or some other mobile unit

Site Description: Please choose the site description that best matches your site from the drop down menu.

Site Type: Please choose the site type that best matches your site from the drop down menu.

Now add the AED's Availability:

By making your AED **"public"**, you will be enhancing your community's ability to respond to a victim of Sudden Cardiac Arrest. Time is the most critical variable in cardiac arrest survival. You, or your company, have recognized that by purchasing the AED.

If your community subscribes to the AED Link™ system and a cardiac arrest occurs within 1,200 feet of your location, the 9-1-1 operator will be able to identify your location and direct someone to ask you, or a designee, to bring the AED to help save a life.

> **Good Samaritan laws protect users and responders. Owners are also protected as long as the device is maintained in accordance with manufacturer's specifications. This registry will support you in keeping your AED's electrodes and batteries current as a requirement of the Good Samaritan laws. Please check with your local laws for specific information.**

If your community subscribes to the AED Link™ system and you designate your AED **"private"**, your AED will not be summoned by 9-1-1 in the event there is a cardiac arrest anywhere but at your location.
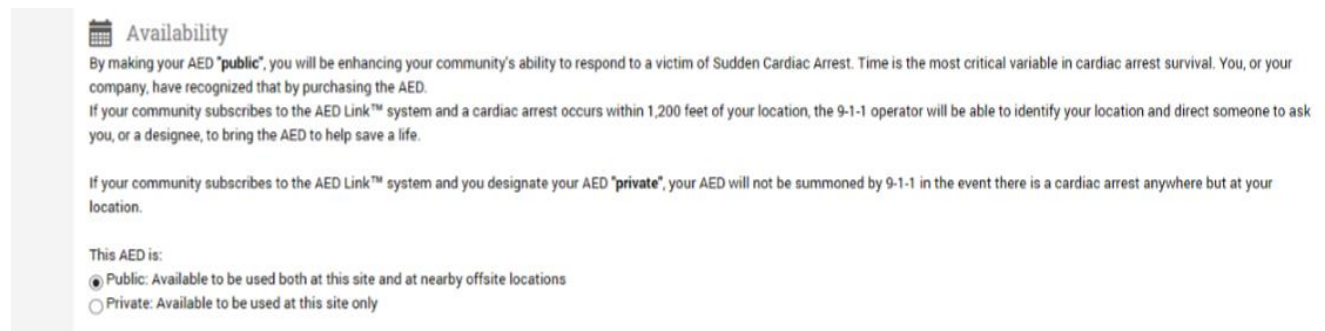

Schedule Type
This provides EMS and the 9-1-1 system with the knowledge as to the days/times that the AED would be available if needed. Please mark as appropriate and follow the prompts.

RESPONDERS (For communities with AED Link at the 911 center: see Appendix B)

If your AED "Availability" is "Public", Responders are individuals who agree to respond to a call from the local 9-1-1 system to assist a victim of a nearby sudden cardiac arrest with their assigned AED. This request will only be made if the victim is within 1,200 feet of the location of the AED. It is not based on where you are at the moment. If you are unable to respond, you will have the opportunity to press a button on your phone to communicate that back to the 9-1-1 system.

Please note that there is no duty to respond and your good faith actions are covered by the Good Samaritan Laws.

If your AED "Availability" is "Private", the Responder will only be summoned for an SCA emergency within your own address. This can be an important enhancement to your Program's AED response plan.

👥 Responders

(For communities with AED Link at the 911 center)
Individuals who agree to respond to a victim of a nearby sudden cardiac arrest with their assigned AED to a call from the local 9-1-1 system. This request will only be made if the victim is within 1,200 feet of the location of the AED. It is not based on where you are at the moment. If you are unable to respond, you will have the opportunity to press a button on your phone to communicate that back to the 9-1-1 system.

Please note that there is no duty to respond and your good faith actions are covered by the Good Samaritan Laws.

Notes

Add Responder **Cancel**

When you have completed this screen, click **Add Responder**

After adding all these items click: 📝 **Save AED**

Please note: Any time information that relates to an AED in your program changes, i.e. new batteries and/or new electrode pads are installed please be sure to change that data in the Registry.

If you have already registered your AED Program in the AED Registry, log in by clicking the "Sign in" button.

On the next screen "Sign in", enter the Username or Email address and password you set up when you registered.

You should now be looking at your AED Program Home page. Registry Home provides you with a snapshot view of the AEDs in your Program.

Sample of AED Program Home Page

Your "Readiness Score" is a percentage of electrodes and batteries that are NOT expired. Anything less than 100% "Ready" means that you must take action to replace a battery and/or electrode pad. If Batteries and/or Electrode Pads have expired, the date will be in "red" with a triangle preceding it.

If you haven't added Inspectors or Responders to your AED Program you will see a "red" triangle and "red 0" in those columns.

To examine your AED Program's maintenance issues you can click on "Review Maintenance Issues" or on the "Maintenance Log" tab at the top of the screen.

See the next section about adding inspectors.

INSPECTORS

The most important part of having an AED is to make sure that it is ready to use when a cardiac emergency happens. That means making sure the battery is working and the electrode pads have not gone past their expiration date. Because they dry out after their expiration dates, the electrode pads have to be replaced periodically based on manufacture's recommendations. Failure to do so can void your protection from the Good Samaritan laws.

Inspectors will be responsible for the inspection, maintenance and servicing of AEDs they are assigned to by the AED Program Coordinator. When the AED Coordinator invites them to participate as an Inspector for their AED Program, they will create an account in the AED Registry. Once they have completed that process, they will be able to view their assigned AEDs and update the expiration dates for batteries and electrode pads. They will receive monthly reminder emails to inspect the AEDs and emails to notify them when either a battery and/or electrode pad is approaching its expiration date.

To begin, click on the inspector tab and then "Invite New Inspector". This will open the page like below:

Simply enter your inspector's email address, first and last name and any custom message you want to include. Then check the box (or boxes) of the AED Locations for which you want them to be an inspector.

The inspector will receive an email invite from the Program Manager and then be asked to register as an inspector and then confirm that registration when they receive an email requesting them to do that.

Changing Inspectors

Click on the inspectors tab and select: "Inspector List" (shown here).

Then find the location for that inspector and click on the hyperlink for their name.

This will open up a page showing all AEDs, and the assigned AED will have a "✓". Unclick, or clear, the "✓" by clicking on it.

Next, click on   and this will remove that inspector. To add a new inspector to an AED, please go through the "invite new inspector" process.

Maintenance Log

There are three elements to the Maintenance Log: Open Issues, Upcoming Maintenance, and Closed Issues.

Open Issues: These are items which are currently expired and need immediate attention by changing the expired items. Please note that, in order for your reminders to work properly, you'll need to update the expiration dates once the item has been changed.

Upcoming Maintenance: To help you keep on top of supplies, we provide you with a list of items that are going to expire in the next 90 days.

Closed Issues: This gives you a digital audit trail of the changes that have been made to an AED. Once you have changed a date for an expired item, that item and the dates changed will appear hear.

Appendix A – AED data fields required

AED Information Requirements			
AED Location Name	Required	Description Name of the location	Example Peet's Coffee Shop — Lake Oswego
AED Street Address 1	Required	Address of the AED installation	345 First Street
AED Street Address 2	Optional		Suite #111
AED City	Required		Lake Oswego
AED State/Province	Required		OR
AED Postal Code	Required		97034
AED Country Code	Required	ISO country code of the AED installation address	US
AED Placement	Required	A description of where the AED can be found at the installation site (e.g. "by the front door, on the north wall"). Hint: if you were going to direct someone to go get it, what would you tell them?	Behind the counter, next to the cash register
AED Serial Number	Required	The serial number of the AED that was assigned by the manufacturer	55988776
AED Manufacturer	Required	The name of the AED manufacturer	Medtronic
AED Model	Required	Manufacturer model number and/or name	LifePak 500
AED Date Installed	Optional	Date the AED was placed into service (mm/dd/yyyy)	5/1/2003
AED Asset Tag Number	Optional	Site-specific asset or inventory tracking number (not used by Atrus)	FA331877433
Battery Model	Required	Model number or name of the battery	11141-000069
Battery Expiration Date	Required		3/1/2008
Electrode Model	Required	Model number or name of the electrode (s)	11996-000017
Electrode Expiration Date	Required		10/1/2010
